

Longleaf & Herbicides 2021

On June 15, 2022, North Carolina Forest Service staff, consulting foresters, wildlife biologists, and private landowners gathered together to attend a Longleaf Academy workshop hosted by The Longleaf Alliance at the N.C. Cooperative Extension Center in Elizabethtown, NC. This workshop was designed to give participants the tools needed to incorporate herbicides into their own unique longleaf management objectives.

On June 16, participants visited nearby Bladen Lakes State Forest to see examples of how site conditions, burn history, and management objectives can inform herbicide application.

This workshop was made possible by support from the N.C. Forest Service, N.C. Tree Farm Program, National Fish & Wildlife Foundation, and The Dobbs Foundation. Visit longleafalliance.org for future Longleaf Academy opportunities.
